Factoring Practice
From Herman & Ross Algebra
P. 232 and 233

Ex. 15a.

(25) $x^2 + x - 72$

(26) $x^2 - 14x + 45$

(27) $x^2 - 12x - 45$

(28) $x^2 + 10x + 9$

Ex. 15c.

(1) $2x^2 + 3x + 1$

(3) $2x^2 + 5x + 2$

(5) $3x^2 + 5x + 2$

(4) $3x^2 + 7x + 2$

(6) $5x^2 + 21x + 4$

(7) $4x^2 + 12x + 5$

(8) $2x^2 - 5x - 3$

(9) $3x^2 - x - 2$

(10) $5x^2 - 4x - 1$

(11) $7x^2 - 34x - 5$

(12) $3x^2 - 11x - 4$

(13) $4x^2 - 4x - 3$

Derivatives using Power Rule

Find the derivatives using power rule:

$y = 10x^3$

$y = \frac{1}{2}x^{-2}$

$y = \frac{1}{2\sqrt{x}}$

$y = 3x^{-\frac{1}{15}}$

$y = 8x^6 + 2x^{17}$

$y = \sqrt[5]{x}$

$y = x^{\frac{1}{31}} + x^{-\frac{1}{7}}$

$y = 2x^{12} + 6x^7 + x^4$

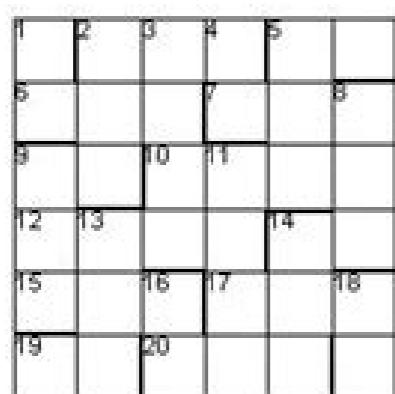

$y = \frac{5}{3}x^3 - \frac{7}{6}x^6 + \frac{6}{4}x^8$

$y = \frac{1}{2}x^{\frac{3}{2}} - \frac{22}{7}x^{-\frac{5}{2}} + x^{\frac{3}{7}}$

High school probability worksheets with answers. Probability worksheets high school with answers pdf

I provide comprehensive worksheets to revise a particular topic (always with answers included) as well as extension materials, for pupils ranging from age about 11 to 16+. All of my premium resources have a UK and US version. Last updated 22 February 2018 Two worksheets, testing basic probability with dice, coloured balls and letters. The second worksheet is more difficult and introduces sampling with and without replacement. Full solutions included. Creative Commons "Sharealike" Select overall rating (no rating) Your rating is required to reflect your happiness. Write a review Update existing review It's good to leave some feedback. Something went wrong, please try again later. Awesome Thanks! Empty reply does not make any sense for the end user Great, simple exercises, thanks! Saved me a lot of time! Empty reply does not make any sense for the end user Empty reply does not make any sense for the end user Amazing Empty reply does not make any sense for the end user Thank you! Empty reply does not make any sense for the end user Report this resource to let us know if it violates our terms and conditions. Our customer service team will review your report and will be in touch. Calculating simple interest is an essential skill for anyone who maintains a bank account, carries a credit card balance, or applies for a loan. The free printable worksheets in this lesson will improve your homeschool math lessons and help your students become better at calculations. This collection of worksheets will also help students understand the process using word problems. Answers are provided for each of the five worksheets on the second page for ease of grading. Before having students start on the worksheets, explain that when you borrow money, you have to repay the amount you borrowed as well as any added interest charges, which represents the cost of borrowing. In the same way, explain to students that when you lend money or deposit funds in interest-bearing accounts, you typically earn interest income for making your money available to other people. D. Russell Print the PDF: Simple Interest Worksheet No. 1 In this exercise, students will answer 10 word problems about calculating interest. These exercises will help homeschoolers learn how to calculate the rate of return on investments and illustrate how interest can accrue over time. Students will answer such questions as, "How much interest does a \$318 investment earn at 9 percent over one year?" Explain to students that the answer would be \$28.62 because $\$318 \times 0.09$, which equals \$28.62. Explain to students that they would have to pay this amount of interest in addition to repaying the principal, the amount of the original loan, \$318. D. Russell Print the PDF: Simple Interest Worksheet No. 2 These 10 questions will reinforce the lessons from worksheet No. 1. Homeschoolers and other students will learn how to calculate rates and determine interest payments. For this PDF, students will answer word problem questions such as: "If the balance at the end of eight years on an investment of \$630 that has been invested at a rate of 9 percent is \$1,083.60, how much was the interest?" If students are struggling, explain that calculating this answer involves only simple subtraction, where you subtract the initial investment of \$630 from the ending balance of \$1,083.60. Students would set up the problem as follows: $\$1,083.60 - \$630 = \$453.60$ Explain that some of the information in the question was extraneous and not necessary to solve the problem. For this problem, you don't need to know the years of the loan (eight years) or even the interest rate; you only need to know the beginning and ending balance. D. Russell Print the PDF: Simple Interest Worksheet No. 3 Use these word questions to continue practicing how to calculate simple interest. Students can also use this exercise to learn about the principal, rate of return (the net gain or loss on an investment over a specified time), and other terms commonly used in finance. D. Russell Print the PDF: Simple Interest Worksheet No. 4 Teach your students the basics of investing and how to determine which investments will pay the most over time. This worksheet will help your homeschoolers polish their calculating skills. D. Russell Print the PDF: Simple Interest Worksheet No. 5 Use this final worksheet to review the steps for calculating simple interest. Take time to answer questions your homeschoolers may have about how banks and investors use interest calculations. In 10th grade worksheets on probability we will practice various types of problems based on definition of probability and the theoretical probability or classical probability.

1. Write down the total number of possible outcomes when the ball is drawn from a bag containing 5 red balls, 3 black balls and 4 green balls.

2. Fill in the blanks.

(i) The probability of an event is less than or equal to but greater than or equal to

(ii) If E is an event then $P(E) + P(\overline{E}) = \dots$

(iii) The probability of a sure event is

(iv) The probability of an impossible event is

3. A survey was conducted on 1200 families and the number of children in each family was recorded. The results are given below:

Number of Children	Number of Families
0	400
1	500
2	300
3	100
4	20

If a family is chosen at random, find the probability that it will have

(i) exactly 2 children

(ii) less than 2 children

(iii) more than 3 children

(iv) no children

4. A survey was conducted on 1500 families having 2 children each. The results obtained are given below:

Number of Children	Number of Families
0	100
1	100
2	1300
3	100

If one family is selected at random, find the probability that it will have

(i) no girl child

(ii) at least one girl child

(iii) no boy child

5. Seeds were kept in 5 containers to germinate. Each container contained 100 seeds. After 20 days the germinated seeds were counted and the results were recorded as shown below:

Number of Germinated Seeds	Number of Containers
less than 70	2
more than 72	1
more than 83	2
at least 83	1

If a container is selected at random from then, find the probability of finding

(i) less than 70 germinated seeds

(ii) more than 72 germinated seeds

(iii) more than 70 germinated seeds

(iv) at least 83 germinated seeds

6. The marks scored by 100 students are given below:

Marks	Number of Students
less than 20	10
below 60 but not below 40	10
less than 40	10
more than or equal to 60	10
below 80.7	10

Find the probability of

(i) getting a red marble

(ii) getting a marble which is not red

8. A box contains 5 red marbles, 7 black marbles and 3 white marbles. One marble is picked up at random. Find the probability of

(i) black

(ii) red

(iii) not white

(iv) black or white

9. Find the probability that a number selected at random from the numbers 1, 2, 3, 4, ..., 34, 35 is a

(i) prime number

(ii) multiple of 7

(iii) divisible by 3 and 5

(iv) multiple of 3 or 5

(v) not a multiple of 7

10. A bag contains 6 red balls, 8 white balls, 5 green balls and 3 balls. One ball is drawn at random from the bag. Find the probability that the ball drawn is

(i) white

(ii) black or red

(iii) not white or black

11. In a lottery there are 5 prizes and 45 blanks. Sophie has one ticket for the lottery. What is the chance (probability) that Sophie

(i) will get a prize

(ii) will not get a prize?

Also verify that the sum of the probabilities in (i) and (ii) is 1.12. A box contains 19 balls bearing numbers from 1 to 19. A ball is drawn at random from the box. Find the probability that the number on the ball is

(i) a composite number

(ii) divisible by 3 or 4

(iii) divisible neither by 5 nor by 10

(iv) an even number

13. There are two children in a family. Find the probability that there is at least one girl in the family.

14. In a class there are 35 boys and 15 girls. What is the probability of a randomly selected student of the class to be a girl?

15. Find the probability of getting 53 Mondays in a non-leap year.

16. Find the probability of getting 53 Fridays in a leap year.

17. Find the probability of getting 52 Saturdays in a leap year.

18. If the probability of India winning the next Cricket World Cup is 0.25, what is the probability India not winning the next Cricket World Cup?

19. In an experiment there are exactly three elementary events. The probabilities of two of them are $\frac{2}{9}$ and $\frac{3}{9}$ respectively. What is the probability of the third elementary event?

Note: The sum of all the elementary events is 1. Answers on 10th grade worksheet on probability are given below to check the exact answers of the questions.

Answers:

1. 122. (i) 1, 0 respectively.

(ii) 1(iii) 1(iv) 03. (i) $\frac{89}{200}$

(ii) $\frac{61}{150}$

(iii) $\frac{21}{400}$

(iv) $\frac{7}{200}$

(i) $\frac{7}{50}$

(ii) $\frac{43}{50}$

(iii) $\frac{19}{60}$

(i) 0(ii) $\frac{4}{5}$

(iii) 1(iv) $\frac{1}{2}$

(i) $\frac{2}{25}$

(ii) $\frac{37}{100}$

(iii) $\frac{21}{100}$

(iv) $\frac{9}{10}$

(i) $\frac{4}{7}$

(ii) $\frac{3}{7}$

(i) $\frac{4}{15}$

(ii) $\frac{2}{3}$

(iii) $\frac{11}{35}$

(iv) $\frac{16}{35}$

(v) $\frac{6}{7}$

Hint: Multiples of 3 or 5 are 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 5, 10, 20, 25, 35.

10. (i) $\frac{4}{11}$

(ii) $\frac{9}{22}$

(iii) $\frac{7}{11}$

(iv) $\frac{1}{2}$

13. $\frac{3}{4}$

14. $\frac{3}{10}$

15. $\frac{1}{7}$

17. $\frac{5}{4}$

18. $\frac{3}{4}$

19. $\frac{4}{9}$

Hint: The sum of all the elementary events is 1. Moving forward to the theoretical probability which is also known as classical probability or priori probability we will first discuss about collecting all possible outcomes and equally likely outcome. When an experiment is done at random we can collect all possible outcomes. Probability in everyday life, we come across statements such as: Most probably it will rain today. Chances are high that the prices of petrol will go up. I doubt that he will win the race. The words 'most probably', 'chances', 'doubt' etc., show the probability of occurrence.

In math worksheet on playing cards we will solve various types of practice probability questions to find the probability when a card is drawn from a pack of 52 cards.

1. Write down the total number of possible outcomes when a card is drawn from a pack of 52 cards.

Practice different types of rolling dice probability questions like probability of rolling a die, probability for rolling two dice simultaneously and probability for rolling three dice simultaneously in rolling dice probability worksheet.

1. A die is thrown 350 times and the Here we will learn how to find the probability of tossing three coins. Let us take the experiment of tossing three coins simultaneously: When we toss three coins simultaneously then the possible Probability
